

***And all the roads that lead us there are winding...***

This Litepaper was never intended to provide an exhaustive account of the project. *(ED: despite the fact that it actually contains more tangible information on the project than the original whitepaper did!)* As is clear many of the technical specifications and particulars of the various technologies employed are not covered in detail, nor was the intention to.

These technical considerations have not been idly omitted and will be comprehensively covered in the full whitepaper, but the decision to release this paper in advance was to provide a concise, up to date overview of the Definitex project, and clarity on its direction to investors old and new.

With that said, many of the complexities and problems involved in providing the various described functionality, are readily solved by incorporating external solutions. Third party providers will be utilized to facilitate aspects of the services available on the platform, all seamlessly be integrated behind the scenes into the app.

Our goal is not and was never to become the next *decentralized* financial powerhouse, but to provide all of the desired features and products that 'De-Fi' can offer - combined with the practical application of the contactless payment - all within one platform.

As aforementioned we have many things on the horizon that are not covered within. Further token utility and application, future products and partnerships required with third party providers to support various functionality described, will be announced in due course when we can provide adequate, viable details and at a time which will be the most beneficial for the project.

With that said, we are on track.

The DFX Staking Incentive will go live as of 28<sup>th</sup> November via the portal on our website in advance of its availability on the Android OS app.

The mobile app platform itself, will go into ALPHA testing with basic functionality, and then we will release it for BETA testing available to members of the DFX community before launch.

Staking through the app will be incorporated into the app as part of the BETA testing.

## ***Token Information***

Token Description: Definitex

Token Name: DFX

Technology: ERC 20

Total Token Supply: 350,000

Token Issue Price: 0.75 USD

Hard Cap: 400 ETH

Token sale Date: August 27, 2020

Contract address: [0xf1f5De69C9C8D9BE8a7B01773Cc1166D4Ec6Ede2](#)

The Hard Cap of 400 ETH was reached in a few short hours, and DFX became available on Uniswap on September 1<sup>st</sup> 2020.

Token Distribution from the original token sale conducted in August was as follows:
